

Third-Party Maintenance Proposal

Systain by OSI Global | Prepared for Pennsylvania Courts

Prepared for	Pennsylvania Courts Attn: Amanda Sheibley, Procurement Specialist II 601 Commonwealth Avenue, Suite 1500, Harrisburg, PA 17106-1260
Prepared by	Andy McLean, Solutions Executive OSI Global andy@osiglobal.com 347-972-7164
Date	April 23, 2026
Quote reference	58295575048 v2.0 (dated March 30, 2026)
Service Level	24x7x4 Service, with Field Services (4H-FS)
Coverage term	12 months April 1, 2026 through March 31, 2027

Overview

This proposal outlines the Systain support services OSI Global will provide to cover the Pennsylvania Courts' two Oracle StorageTek SL150 tape libraries for a 12-month term while your team plans and executes a replacement. The objective is to keep the environment fully supported with a predictable SLA and a direct line to senior engineers, so there is zero operational risk during the transition year.

Systain is OSI Global's manufacturer-agnostic, Gartner-recognized third-party maintenance service. It is designed to extend the life of assets past OEM end-of-service with SLAs that meet or exceed what the manufacturer offered.

Covered Equipment

#	OEM Model	Serial Number	Site	Drives	Expansions
1	Oracle StorageTek SL150	464970G+1511SY4014	Pittsburgh, PA 15220	16 x LTO-6	7
2	Oracle StorageTek SL150	464970G+1511SY4007	Mechanicsburg, PA 17055	12 x LTO-6	5

All pricing and line-item detail is captured on Quote 58295575048 v2.0, which accompanies this proposal.

Service Level: 24x7x4 with Field Services

Coverage window

Remote technical support and parts logistics are staffed 24 hours a day, 7 days a week, 365 days a year. There is no after-hours, weekend, or holiday gap in coverage.

Response targets

Action	Target
Initial response from OSI support rep after ticket open	Within 15 minutes
Remote engineer engagement	Within 30 minutes, 24x7
Onsite delivery of replacement parts and field engineer	Within 4 hours of Action Plan approval

What Field Services means

Your SLA includes onsite field engineering (the FS designation). When a part needs to be replaced, OSI dispatches a qualified field engineer to your site to handle the physical work. Your team does not have to swap hardware. OSI's field engineers are vetted partners operating under OSI's direct oversight. For any hardware event, a bridge can be opened between your system administrator, OSI's remote subject matter expert, and the field engineer, so everyone is working the issue in real time.

Service is considered complete only when the hardware is replaced and confirmed working by your team.

How an Incident is Handled, Step by Step

1. Open a ticket

Your team can open a ticket through any of four channels. Direct phone call to the OSI support desk, direct email to the support desk, the Systain web portal, or automated remote monitoring if configured. A detailed helpdesk instruction sheet is provided at contract start so every member of your team knows exactly how to reach us.

2. Acknowledgment within 15 minutes

An OSI support representative replies to your designated point of contact within 15 minutes with the OSI ticket number, confirmation of the equipment (make, model, serial, location), a brief description of the problem, the requested service window, site access instructions, and the priority level of the incident.

3. Action Plan

Before any onsite response, OSI delivers an Action Plan to your team. The Action Plan contains a summary of the incident, diagnosis of the issue, supporting information for the diagnosis, and the proposed resolution. Nothing happens onsite until your team approves the Action Plan. This keeps your team in control at every step.

4. Dispatch and resolution

Once the Action Plan is approved, OSI dispatches the replacement part and field engineer within the 4-hour window. All parts are new or functionally equivalent to new and match the OEM part number or the appropriate replacement. Parts are stocked in OSI's regional forward-stocking locations to meet the 4-hour SLA for both the Pittsburgh and Mechanicsburg sites. If additional troubleshooting is needed, an OSI subject matter expert stays on the bridge until the issue is resolved.

Incident Priority Levels

Priority	Definition
P1	Critical system down. Business-impacting issue. Potential data loss.
P2	System failure. Potential business-impacting issue. Operation degraded.
P3	Non-critical failure. All systems operational. Includes warning lights, single drive failures, power supply failures with redundancy, and similar events that could escalate if unresolved.
P4	No failure. Requests for system IMACs, configuration changes, upgrades, installation, or de-installation questions.

Systain Client Portal

Every Systain client receives access to the Systain Client Portal, a centralized console where your team can manage all aspects of support coverage.

- Aggregate all contracts and assets in one place, regardless of vendor.
- Open, track, and manage support tickets directly from the portal.
- Set reminders on sunseting coverage agreements and flag end-of-life or last-day-of-support timelines.
- Store and update frontline tech support, ordering, fulfillment, and shipping contacts for every vendor.

Optional: Remote Monitoring

For qualifying devices, OSI offers a remote monitoring service that provides call-home functionality directly into the OSI support desk. Notifications carry hardware failure information (error code, part number, device location) from the system hardware layer. No remote or data access is required. Call-home alerts are filtered and processed into support tickets automatically, which lets OSI pre-stage parts and field engineering before your team notices the fault. Remote monitoring availability for the SL150 platform can be confirmed at contract start.

Why OSI Global

Transparency	You know exactly what the sparing plan is and who the delivery partners are.
Expertise	In-house Level 2 and Level 3 engineers answer every call. No Tier 1 gatekeeping.
Flexibility	Changes to your lifecycle plan are not a problem. You dictate the terms of support.
Boutique delivery	OSI's mission is to be the best support experience your team has ever had. Guaranteed.
Privately owned	100% owned by the original three founders. No private equity. No corporate layers between your team and the people making decisions.
Scale	5,000+ global clients. 100+ countries served. 24x7x365 support.

"After a detailed review of our OEM maintenance costs and alternative options, we moved 14,000 assets to OSI's third-party maintenance in 2019. Based on the success and substantial savings, we moved another 24,000 assets over to Systain in 2020. Four years in, we have saved millions in maintenance costs."

Director, Global Network Ops and LAN Services, Global Pharmaceutical Company

Next Steps

- Review this proposal alongside Quote 58295575048 v2.0 with your technical team.
- On approval, Pennsylvania Courts issues a purchase order against the quote.
- On PO receipt, OSI sends a welcome packet with helpdesk instructions, Systain portal credentials, and the designated points of contact for both the Pittsburgh and Mechanicsburg sites.
- Coverage begins April 1, 2026, and runs through March 31, 2027.
